

Binder *Labortechnik*

Mini desiccator for SEM samples.

The model is suitable especially when dust and oxidation protection for organic and inorganic samples but also for storage of calibration samples.

The desiccator has a conical suction socket, which can be taken off after the evacuation. An accidental ventilation is therefore excluded. Ideal if samples for example on travel are transported.

The evacuated volume allows a recording by 19 grid sample (Default Fei/Philips) or Gridboxen for transmission electron microscopy.

Dimensions: 130 mm x 130 mm x 46.5

Total height without cover: 40 mm

Sample Chamber inside diameter.: 104 mm

Sample Chamber height: 18 mm

Nitrogen: Coverage would have to be modified

Protective gas: Coverage would have to be modified

Vacuum: Yes

Transport by Gridboxen: Yes

Transport of grid samples: Yes
